PREFACE

At the end of one's school or college days one is faced with a problem. "What should I do now". Evidently while many enter into clerical line, the others go ahead for higher technical, professional and educational studies to serve the nation and honourably earn their livelihood. This book is written for those young boys and girls and ambitious youngmen and women to enable them to solve the above problem which sometimes faces them seriously. The book contains useful details of various kinds of studies which are at present available in India and learning one or more of them will surely give them a place of honour in the society.

The need of such an up-to-date and detailed informative book had come to be felt more and more in a Free India. We have, therefore, ventured to bring out this publication which fills a great need of the nation and is a great step towards helping the youngsters in their educational guidance at a nominal cost.
